Handwriting: Essential for Building Literacy Skills

Sadlier's **NEW!** Handwriting program cultivates fine motor skills and activates various regions of the brain essential for cognition, language processing, and memory functions.

- A **3-step instructional approach**—Introduce, Model, Practice and Write—is mapped out in the wraparound Teacher's Edition and in instructional letter formation videos.
- **Explicit instruction and modeling** is provided for manuscript (print) and cursive letter formation combined with the associated letter sound.
- **Modeling** of starting points, stroke sequences, and directionality, including proper pencil grip and posture for each letter and numbers 0–10, guides each student.
- **Visual and audio representations** of letters prepare students for a comprehensive understanding of reading and writing fundamentals.
- Students **practice** writing lowercase and uppercase letters individually, in words, and in the context of sentences.
